About Me

Junior Frontend Developer passionate about modern web development, with strong skills in React, JavaScript, and UI/UX. I am characterized by seriousness, a continuous desire to learn, and the ability to work efficiently both independently and as part of a team. I aim to contribute to projects with real impact and to grow in a professional environment.

Work Experience

Projects

Fatigue Monitoring Application - FocusKeeper
Developed an application using Python and AI to monitor and optimize user focus and energy levels during driving and work sessions. Contributed to defining functional and non-functional requirements, designing system architecture and user interface, and implementing core features to enhance productivity and prevent exhaustion.

Dental Management & Organization App - DentFlow
Developing a dental management application using React (frontend) and Python with FastAPI (backend) to help dental offices efficiently organize appointments, patient records, and workflows. Responsible for system design, UI development, and implementation of core features to optimize daily operations.
